## SPA's in Rails with Middleman

SPA part 1 - case (harder but worth it)

rails - SOLD js wars - don't care which one SPA - case (harder but worth it) middleman - emphasis

when you only do a web app you've locked valuable data from business logic. It's not always a web app. you are leaving money on the table and info off the table.

#### middleman - emphasis

- static / fast
- iterative
- startup feedback fast
- additive
- ruby
- asset pipeline (sass, coffee, haml)

middleman STart demo (static site generator in ruby) w/ gen mm mm is startup friendly b/c you can get your concept running quickly without the need for a backend (for proof of concept) bridge b/n web design & web dev but why gen a static site in ruby? - asset pipeline - goes from design concept to running, static page that can be deployed with from static data to mock api data

#### SPA part 2 - don't care which one

why SPAs / js heavy? 2. we are going to use ng

to real data

### BACKEND - STUB / RAILS

STUB API you can get a deeper, more accurate json server proof of concept without a lot of (data source doesn't coding (or backend) Since it's rails MM gives the ROR developer a place to go in SPA development arch. with JS without we call it the ARM STACK needing to introduce a second tool stack like node The Arm Stack get benefits of rails frontend but moving it to MM. (haml / erb) in MM add rails rails new blog

install

Q&A
- testing

# S-situation P-problem - implication N - needpayoff

#### TODO

- abstract
- clean up and convert to PDF
- post to github
- set up a meeting for 2 weeks from today (4/27)

this is refactoring.
